INTRODUCTION

The Graymills LKN Liftkleen is a heavy-duty, multi-function, commercial-type parts cleaner designed for both industrial and automotive applications. It is available for use with either heated aqueous or unheated solvent cleaning solutions.

Standard LKN features include, but are not limited to:

- PLC control
- Automated pneumatic lift platform with oscillation feature
- Automated pneumatic lid operation
- Timed or untimed cycles
- 24/7 timer capability to turn on and off optional heaters to coincide with production demands

A number of optional features are available:

- Superflo® Agitation Pumping Unit with an output of up to 10,000 gallons per hour
- Filtration system
- Turbo-Boost filtration system – Agitation and Filtration all in one package!
- Roller conveyor platform (instead of standard grate)
- Loading and unloading conveyors
- Drop-in type immersion heaters
- Skimmer for removing oil and grease-type contaminants

CONSTRUCTION FEATURES

TANK ASSEMBLY

The Liftkleen was designed to withstand the rugged demands of heavy-duty industrial and automotive parts cleaning. All tanks are leak-tested for 24 hours after welding. The bottom of the tank utilizes double wall construction and is supported by four channels. Openings are provided to facilitate moving the Liftkleen with a fork-lift truck. A drain is located in the bottom or rear of the tank to which permanent drain connections can be attached. On all models, the tank sides and cover are insulated with 1" thick polystyrene foam (equal to two-plus inches of fiberglass).

PLATFORM ASSEMBLY

The Platform is designed to handle loads specified for the particular model of Liftkleen. The platform consists of a welded steel frame which supports an open composite grate. The platform assembly is made up of a steel weldment, platform support weldment, support rollers with bearings, hardened steel roller axles, and one or two pneumatic cylinders (depending on the model). Rollers and bearings on all Liftkleen units are located outside the tank and are never immersed in the cleaning solution. This helps keep moving parts lubricated. The standard open composite grate of the platform assembly can be replaced with either a stainless steel grate or roller conveyor platform, both optional.

AUTOMATIC LID ASSEMBLY

On all LKN models, opening and closing the lid is accomplished automatically via pneumatic cylinder(s). Lids, as well as tanks, are insulated on all units. The internal face of the lid is made of stainless steel to eliminate corrosion caused by vapor condensation.

Unheated units contain a temperature sensitive automatic lid-closing feature. In the event of a fire in the tank, the platform assembly lowers and the lid closes automatically.

PNEUMATIC CONTROL

The LKN is furnished with a pneumatic system that raises and lowers the platform, a master on/off valve and a filter/regulator. The agitating lift platform contains air controls that agitate the platform up and down through a range of five inches with a variable frequency of strokes per minute. Stroke frequency depends on load and available air pressure and volume. When available, adjustments to the system should be made under operating load conditions.

All pneumatic tubing connections are made with Instant Fittings. These make it possible to connect and disconnect the tubing to the fittings without the use of a wrench. To disconnect a tube, simply push in the collet and pull the tube from the socket. To engage the tube, push it into the fitting until it hits the stop. Sealing of the connection is achieved with an O-Ring in the fitting.

The air cylinder for raising, lowering and oscillating (agitating) the work platform has pneumatic lines connected to both its "up" and "down" ports. This provides for smooth, positive, controlled motion in both travel directions with minimal dependence on the weight of the work load.

The "down" portion of the air cylinder is controlled by flow control valves and/or speed control mufflers. The speed will vary with the weight of the work load. However, the speed control muffler can be adjusted "in" to slow the downward movement and "out" to speed it up. The advantage of this method is a reduction of air consumption.

Pneumatic schematic included at rear of manual.

TOUCH-SCREEN PLC CONTROL

Touch-Screen PLC controls are standard on all LKN units. This control has been designed to provide the operator with an easy and consistent method of control. From the main screen, all of the machine functions may be easily accessed and current cycle functions are displayed.

The standard PLC control is field-upgradeable to add pumps, heat, skimmers and filtration units with a minimum of cost to the customer while providing maximum benefit.

Control circuit schematic included at rear of manual.

SAFETY WARNINGS

You will find safety information on the following pages and on equipment. The following Safety Statements explain their meaning:

	This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid personal injury or death.
	DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.
	WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.
	CAUTION, used with the safety alert symbol, indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.
	CAUTION, without the safety alert symbol, is used to address practices not related to personal injury.

GENERAL WARNINGS – READ BEFORE OPERATING

DANGER

All Models

- Do NOT use as a cleaning fluid or contaminate cleaning fluid with any flammable materials such as gasoline, mineral spirits or alcohol (under 100°F flashpoint).
- Drain parts to be cleaned of any flammable material or combustible material before placing inside cleaning tank. Even small quantities of such unauthorized materials can cause a health and safety hazard which might result in serious personal injury or death.
- Be sure to follow label instructions provided with any fluid used in this unit. See MACHINE INSTALLATION Section for recommended cleaning compounds.

Heated Models

- Never use a flammable or combustible fluid in this unit. Use only nonflammable, non-combustible, water-based, low foaming cleaning compounds in this machine.

Unheated Models

- Do NOT install near open flames or heat.
- Do NOT smoke near parts cleaner.
- Use only combustible fluids with a flash point of 104°F or higher.

⚠ WARNING

All Models

- Never work with equipment you feel may be unsafe. Contact your supervisor immediately if you feel a piece of equipment is in an unsafe condition.
- Cleaning solutions may be irritating to skin and eyes. Always wear gloves, apron and safety glasses when using. If splashed in eyes, flush thoroughly with water and follow directions on cleaning solution MSDS.
- Install machine in a well ventilated area to avoid possible buildup of cleaning solution fumes.
- These units have moving parts, pinch-points and close tolerances. Always stand clear of lift platform and lid when operating as the lid could unexpectedly open or the platform operate. Keep hands and fingers away from tank when operating platform.
- DO NOT perform any maintenance work on Liftkleen without having the air shut-off valve in the "Off" position and main air lines to cylinders disconnected. Disconnect electrical power. Follow lock out procedures.

⚠ CAUTION

All Models

- When making an initial batch of cleaning solution or when adding compound, follow manufacturer's directions exactly. Wear appropriate safety equipment as recommended. Add only small amounts at one time to prevent a sudden boiling and/or eruption of liquid which will create a hazardous condition. NEVER dump in a large quantity at one time.
- If any cleaning solutions are splashed on clothing, change promptly and thoroughly wash any body areas which have been in contact with solution. Apply lotion. Do NOT permit saturated clothing to remain in contact with skin. Consult solution manufacturer's MSDS for further instruction.
- When turning air on or off or when operating the lift platform, stay clear of the lid, lift platform and operating mechanism as the lid could unexpectedly open or the platform operate.

CAUTION

All Models

- If you have purchased a unit with a carbon steel tank, observe the following before using: Water-based cleaning materials will generate water vapors. Surfaces above the liquid level will be subject to rusting (this condition exists with any manufacturer's unit). This is primarily surface rust and does not appreciably affect the serviceability of the unit. However, if your cleaning requirements cannot tolerate any rust or contamination, please contact the factory for information on stainless steel models before putting the unit into service. Also, be sure your

Heated Models

- Maximum operating temperature is 180°F. Higher temperatures will cause increased risk of personal injury and damage to the unit. Remember, any temperature above 115°F can cause severe burns.
- The operator and anyone working in or around the Liftkleen must be cautious of the hot tank contents (cleaning solution, platform, lid, parts, etc.) and of the steam which escapes when the lid opens. Be sure everyone who works in or around the Liftkleen reads and understands how to use the chemicals or compounds being used, as well as the machine.

Heated Models

- Pump intake is above heater coil. Turn heater (an optional feature) and pump (an optional feature) off immediately. Failure to keep heater coil immersed can cause heater to burn out.
- Tanks should be cleaned out on a regular basis to prevent sludge from building up around heaters. Failure to do so could result in damage to the heaters. Graymills is not responsible for such damage.

Unheated Models

- Unit is equipped with a fusible safety link mechanism. In the event of a fire, the fusible link will melt at 165°F. This will cause the control to lower the platform and close the lid, reducing oxygen supply to the fire. The unit will cease to function until the safety-link has been replaced

cleaning material contains a rust inhibitor. (Check with your cleaning fluid supplier.) The Graymills Warranty does not cover rusting of carbon steel units used with water-based material.

Heated Models

- Either turn heater off or use the 24/7 heater timer when unit is to be idle for extended periods (overnight or weekends). Over time, the cleaning solution could evaporate enough to damage heater coil.

POWER SUPPLY, WIRING AND GROUNDING

⚠ WARNING

- Failure to permanently ground the unit and controls before connecting to electrical power can cause shock, burns or death. Install ground and wiring according to local and national electrical code requirements.
- Unit must be properly grounded to prevent electric shock hazard. Should connections become cracked, frayed or damaged in any way, they should be repaired/replaced immediately by a qualified electrician.
- Fill tank to recommended operating capacity range before connecting power to machine.
- Install a fused disconnect switch on all power legs connected to the unit.
- Disconnect and lockout electrical supply before installing or servicing unit.

MACHINE INSTALLATION

All Liftkleen models are shipped pre-wired and need only be connected to the proper electrical supply (see nameplate for electrical requirements). This is the responsibility of the customer and should be done by qualified personnel. Graymills is not responsible for any damage caused by incorrect supply wiring.

1. Install in Well-Ventilated Area on Level Ground

2. Secure Floor Mounting

Four (4) mounting holes for anchoring the LKN models to the floor are located at the bottom of the base weldment assembly. These holes accommodate 1/2" diameter bolts. The machine must be anchored to the floor at these points. Failure to adequately anchor the unit will affect its lifting capacity and/or cause structural damage to the machine.

3. Attach Drain

An NPT drain is located on the bottom of the tank assembly. A plug is installed at the factory. To make connections to the drain, remove the plug and install appropriate plumbing. Installing a shut-off valve is recommended.

4. Fill Tank to Recommended Level

Prior to making electrical and pneumatic connections, fill tank of LKN unit with cleaning solution to appropriate levels.

Graymills recommends the following cleaning solutions:

GENERAL PURPOSE SOLVENTS FOR UNHEATED UNITS ONLY

Solution	Description
Super Agitene®	Flash point of 105°F. Ideal for cleaning of metal, plastics and painted surfaces. Grease, motor oil, cutting oil and water soluble oils are removed with ease. Gummy deposits unaffected by ordinary mineral spirits are readily softened or removed. Contains Hand Ease® a cosmetic-grade lanolin formulation, which replenishes some of the skin's natural oils removed by solvents. It helps to reduce the chance of irritation and chapping and leaves a protective coating on parts to help retard corrosion, and is a low-odor solvent. It should not be used on parts going into a plating or painting process.
Regular Agitene®	Flash point of 105°F. Same high quality cleaning action as Super Agitene, but leaves no film thus making it ideal for cleaning parts to be painted. It will not attack varnish, allowing it to be used on varnish-insulated electrical components.
Super Agitene® 141	Flash point of 141°F. Contains no ingredients listed as hazardous by the EPA's RCRA. Meets OTC VOC regulations. Has the same attributes as Super Agitene but a higher flash point (141°F) which meets local regulations where use of High Flash Point Solvent is required.

BIODEGRADEABLE ALKALINE (AQUEOUS) SOLUTIONS FOR ANY USE

Solution	Description
Aquatene® 330	A general purpose concentrated detergent in liquid form. Works most effectively when heated between 140 to 180°F. Ideal for use in free-standing manual systems and immersion type part washers. Removes soft carbon deposits, light coatings, grease, gummy residue, oils, latex paint, light varnishes, rust preventitives.
Super Aquatene® 360	A general purpose concentrated cleaner in liquid form can be used up to 180°F for faster cleaning. Ideal for use in free-standing manual systems and immersion type part washers. Removes all items listed for Aquatene® 330 but also effectively cuts buffing and lapping compounds, hard to remove coatings, water-based inks, oxidized oils and heavy or burned-on varnishes.
Super Aquatene® 390	A heavy-duty, low-foam concentrate. Ideal for steel, cast iron, and other ferrous metals (not for use on non-ferrous metals). Removes most greases, light oils, water soluble inks, hardened composites and loose metal chips. Contains a rust inhibitor. Heat to maximum of 150°F.
Aquatene® 571	Specially formulated for cleaning aluminum and non-ferrous metals. Use heated to 180°F.

5. Pneumatic Supply

All LKN units are supplied with a Filter-Regulator (FR) with a master on/off valve. For optimal performance, connect the largest air supply line available to the inlet of the FR next to the master on/off valve.

CAUTION

When supplying air to the machine, do not use an air supply smaller than that of the machine's FR. The FR of each machine is chosen with respect to the working requirements of the machine. Using a lesser air supply could cause the machine to underperform and/or malfunction.

The pressure regulator is adjustable between 60-110 PSI. The recommended operating air pressure for LKN units is between 90-100 PSI for optimal performance. Operating below the recommended pressure greatly reduces machine functionality. Do not use air pressure greater than 110 PSI. A pressure gauge is provided on the FR.

6. Electric Supply

All electrical connections to LKN units are made to the main control box located on the right side of the machine (from the front) and are clearly marked. Regardless of voltage, all connections must be made to the rotary disconnect on the rear of the control box. Voltage requirements will be displayed above the rotary disconnect on the outside of the enclosure as well as on the machine nameplate.

CAUTION

Check the electrical specifications on the nameplate to assure proper connections.

On 3-phase models equipped with a Superflo pump, make sure that the motor rotation is correct; counter clockwise when viewed from the top. To reverse rotation, switch any two of the 3 phase leads.

MACHINE STARTUP

1. Check to ensure that the Emergency Stop button is in the out position. Pull out button if necessary.
2. Turn master air ON/OFF valve located on the FR. Gauge on FR should read between 90-100 PSI.
3. Rotate disconnect on rear of control enclosure to ON position. The operator interface screen will illuminate.
4. Press the RESET button on the front of the control enclosure. The screen will display an error message regarding the fusible-link (where applicable). This is displayed due to a lack of air in the system.
5. Press the RESET button again. The lid will open and the platform will raise to the top. The ready light will illuminate.

THE LKN CONTROL

OPERATOR INTERFACE

The Graymills LKN is controlled via PLC with a graphical touch-screen interface and pushbuttons for ease of operation (right). The touch screen display has a screensaver that will shut off after a period of no use. Simply touch the screen and it will resume normal illumination.

Button	Function(s)
EMERGENCY STOP	<ul style="list-style-type: none"> Stop all machine function in the event of an emergency Dump all air from system except for air holding cylinders in place Turns off Master Control Relay (MCR) Latches in – must be pulled out to resume operation
RESET	<ul style="list-style-type: none"> Turns on MCR Returns LKN to "READY" state (platform and lid up) Must be pressed twice after an e-stop or on initial startup to go to "READY" Stop automatic cycle or manual operation and return LKN to "READY"
READY	<ul style="list-style-type: none"> Illuminates green when LKN is in "READY" state – CYCLE START may be pressed to initiate automatic cycle
CYCLE START	<ul style="list-style-type: none"> Initiates automatic cycle

READY

RESET

CYCLE START

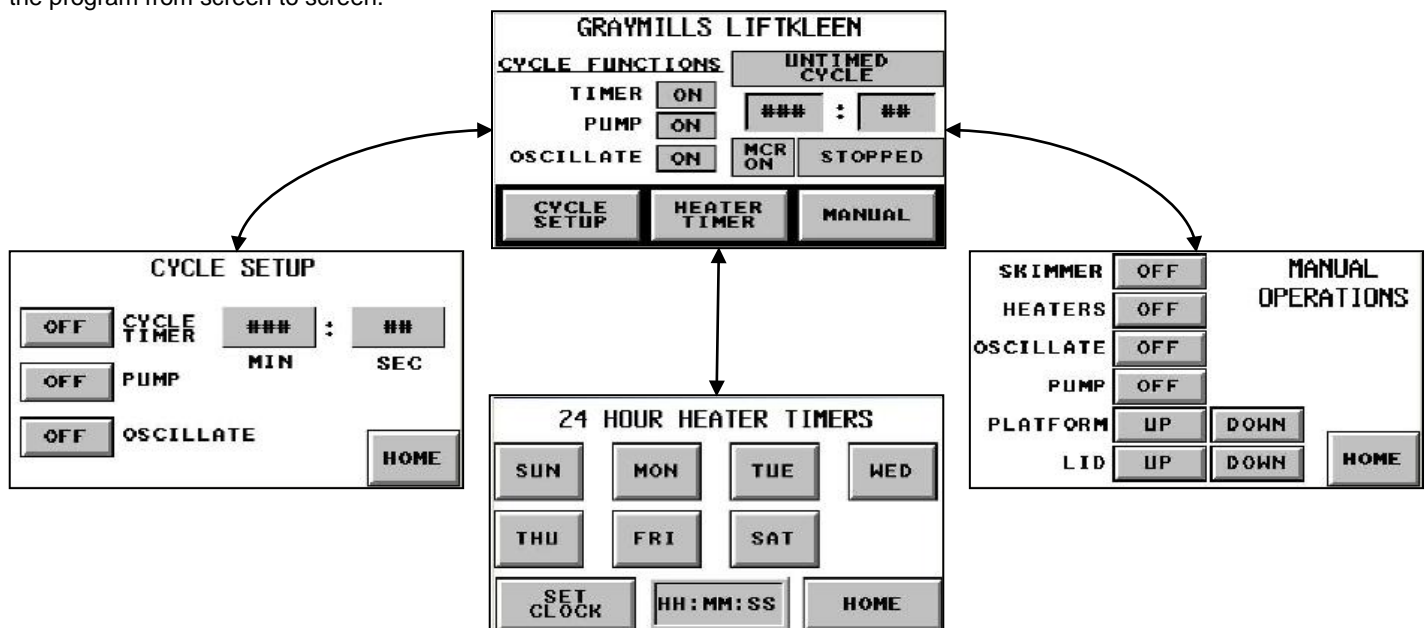

EMERGENCY STOP

LKN CONTROL SCREEN MAP

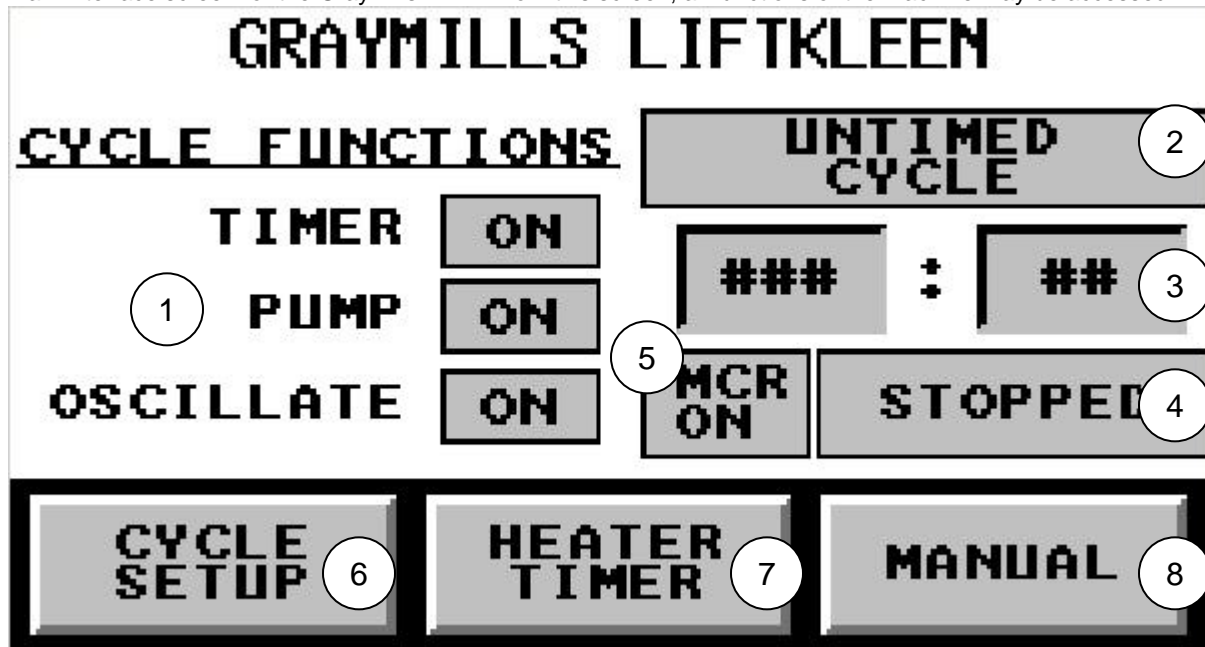

There are four main screens that the operator will use to navigate, program, control, and run the LKN. This map illustrates the flow of the program from screen to screen.

Screen	Description
HOME	<ul style="list-style-type: none"> Main screen of the program Indicates LKN status
CYCLE SETUP	<ul style="list-style-type: none"> Enable/disable functions of machine when in automatic cycle
24 HOUR HEATER TIMERS	<ul style="list-style-type: none"> Set LKN system clock Enable/disable heater ON/OFF times for each day of the week (heater option required)
MANUAL OPERATIONS	<ul style="list-style-type: none"> 5.1. Manual control of all available machine functions

HOME SCREEN

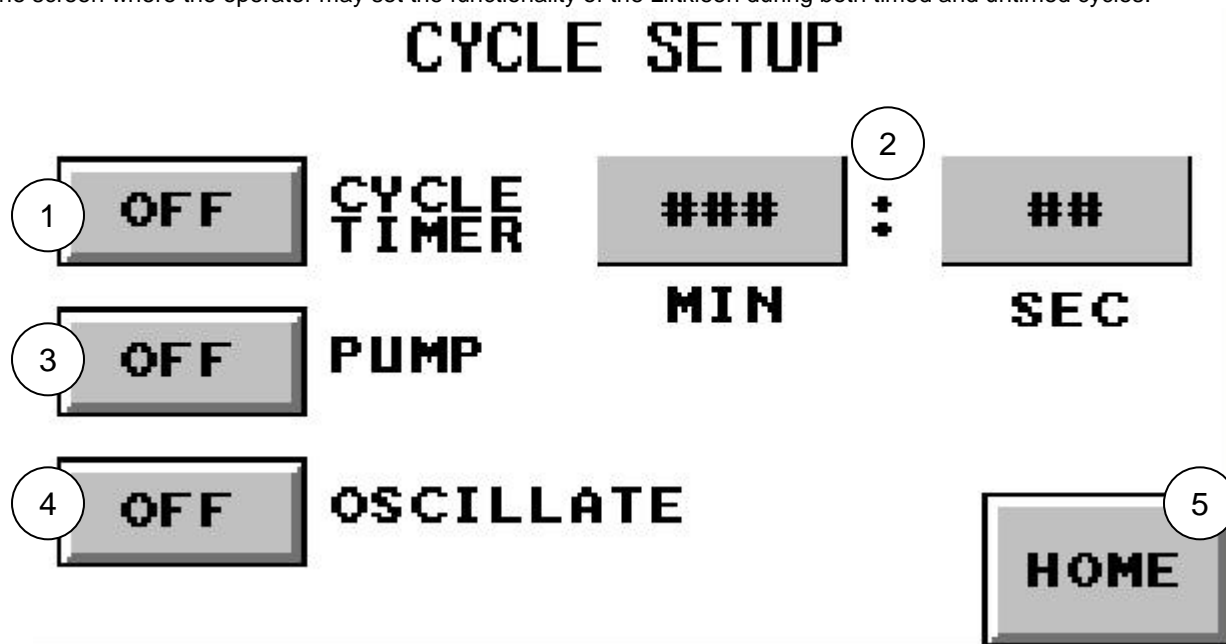

This is the main interface screen for the Graymills LKN. From this screen, all functions of the machine may be accessed.

Number	Description
①	Shows current machine functions that will be active during next cycle
②	Cycle Display – Will either display “UNTIMED CYCLE” or “TIMED CYCLE”
③	Time Display – Shows time remaining during “TIMED CYCLE”
④	Machine Status – Shows machine as either “RUNNING” or “STOPPED”
⑤	MCR Status – When the MCR is off, this will flash “MCR OFF” until RESET is pressed
⑥	CYCLE SETUP – Takes operator to “CYCLE SETUP” screen (Section 2)
⑦	HEATER TIMER – Takes operator to “24 HOUR HEATER TIMERS” screen (Section 3)
⑧	MANUAL – Takes operator to “MANUAL OPERATIONS” screen (Section 4)

CYCLE SETUP

This is the screen where the operator may set the functionality of the Liftkleen during both timed and untimed cycles.

Number	Description
①	CYCLE TIMER – Enables or disables timed machine cycle
②	MIN and SEC – By pressing the button above “MIN” and “SEC”, the operator may set the length of the timed cycle (See Below)
③	PUMP – Enables or disables optional pump/filtration unit operation during cycle
④	OSCILLATE – Enables or disables platform oscillation during cycle
⑤	HOME – Returns to HOME screen

Setting Cycle Parameters

Press buttons ①, ③, or ④ to indicate desired cycle operation. If the operation will be performed during the cycle, the button will display ON.

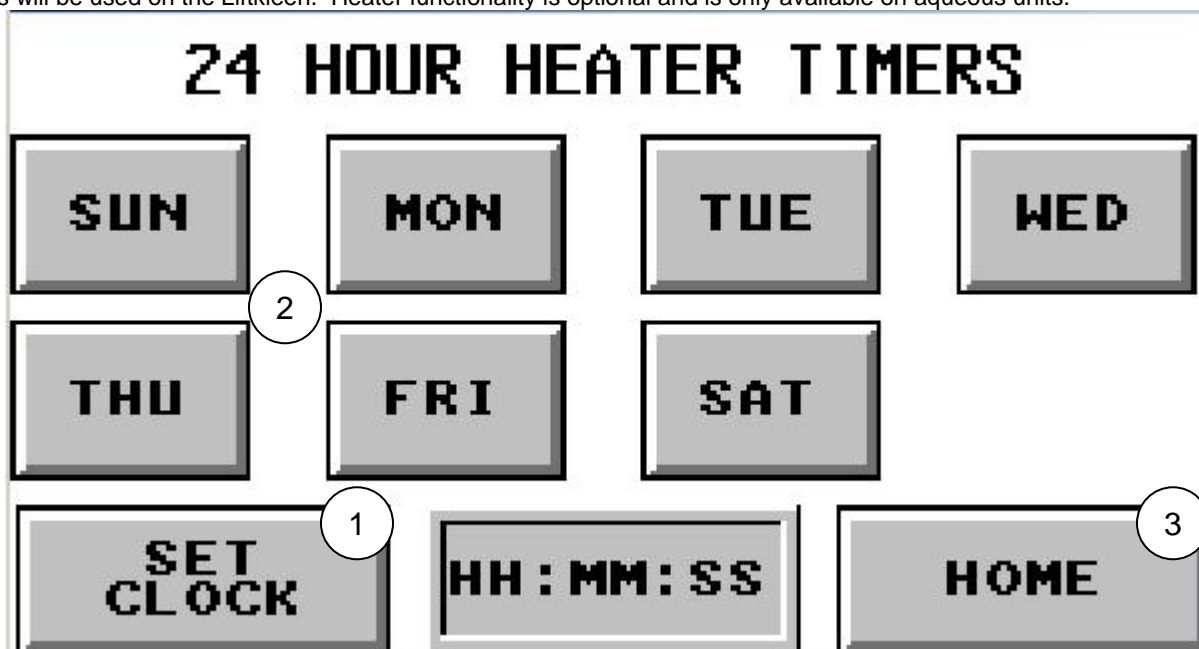

Setting a Timed Cycle

1. Press CYCLE TIMER button ① until the button reads ON.
2. Press the MIN button and enter the number of minutes desired on the number keypad (right). Press ENTER when finished.
3. Press the SEC button and enter the number of seconds desired on the number keypad (right). Press ENTER when finished.

24 HOUR HEATER TIMERS

This is the screen where the operator can set the internal clock of the machine as well as enable/disable the ability to determine when the heaters will be used on the Liftkleen. Heater functionality is optional and is only available on aqueous units.

Number	Description
①	SET CLOCK – Pressing this button opens the clock setting window (See Below)
②	SUN, MON, TUE, WED, THU, FRI, SAT – Press these to edit and enable/disable the 24/7 timer settings for those individual days (See Below)
③	HOME – Returns to HOME screen

Setting Machine Clock

1. Press SET CLOCK button ①.
2. Time-change screen will appear (right).
3. Press + and – buttons until proper date/time has been achieved. *Please note that the hours used in the control program are in a 24-hour format. Example: 1:30 pm = 13:30 hours (12 hours + 1:30 hours)*
4. Press ENT when finished to return to the 24/7 Heater-Timer Setup Screen

Individual Day Settings

1. Press button for day of the week desired.
2. Setting screen for individual day will appear (right).
3. Press BACK when finished to return to the 24/7 Heater-Timer Setup Screen.

Enable/Disable

To enable or disable timed heat for that day, press the large button on the right until it reads DISABLED or ENABLED.

Setting ON/OFF Time

1. Press the hours button for ON or OFF.
2. Enter the hour of day you wish the heat to be enabled/disabled on the number keypad (right). *Please note that the hours used in the control program are in a 24-hour format. Press ENTER when finished.*
3. Press the minutes button for ON or OFF.
4. Enter the minute of the hour you wish the heat to be enabled/disabled on the number keypad (right). Press ENTER when finished.

MANUAL OPERATIONS

From this screen you may operate all available machine functions. NOTE: If the HOME or RESET buttons are pressed, all manual functions will cease.

Function	Type	Description
SKIMMER	Optional	This will engage the optional skimmer, which will remove surface oil from tank. This function is best performed overnight when the liquid in the tank is undisturbed by use.
HEATERS	Optional	Manually turn on heater function. Heaters will only engage when the temperature in the tank is below the temperature set on the electronic temperature control, located inside the main electrical control box. Heaters are only available on aqueous units.
OSCILLATE	Standard	Causes the platform to oscillate. This will continue until the function is turned off manually or either the Emergency Stop or Reset buttons are pressed.
PUMP	Optional	Turn on agitation pump or Turbo-Filtration system. This function will only work when the platform is down.
PLATFORM UP	Standard	Raise lift platform to its highest position. This function will only work when the lid is completely open to prevent damage to the machine.
PLATFORM DOWN	Standard	Lower lift platform to its lowest position.
LID UP	Standard	Fully open lid.
LID DOWN	Standard	Completely close lid. This function will only work when the lift platform is at its lowest position.
HOME	Standard	Return to HOME screen.

THE AUTOMATIC CYCLE

Conditions to Begin Automatic Cycle:

- Machine is "READY" condition (Green "READY" light illuminated.)
- Machine has appropriate air and electricity

Initiating Automatic Cycle:

1. Set desired cycle functions in the CYCLE SETUP screen. If all cycle functions are set as required, proceed to next step.
NOTE: Once cycle begins, functions may not be changed until after cycle comes out or is stopped.
2. Load items onto platform

- The LKN has been designed for evenly-distributed loads, placing unbalanced loads on the LKN platform could result in machine malfunction or failure.
 - Do NOT exceed load height or weight limits listed in the Dimensions and Specifications Section. Exceeding these capacities could damage the machine and will void the warranty for the machine.
3. Press CYCLE START – platform descends, lid closes, cycle begins.

Ending Automatic Cycle:

Timed Cycle – Wait for timer to reach zero or press RESET to end cycle.
Untimed Cycle – Press RESET to end cycle.

OPTIONAL ITEMS

Filtration Systems

Filtration systems are available on all Liftkleen models featuring pump agitation. The system consists of standard, single or dual filters and a selection of filter elements.

- Model LKF-100 is a single cartridge filter and is equipped with a 100 mesh (150 micron) Cylinder Strainer Cartridge. This filter cartridge is made of stainless steel, with fine wire mesh reinforced with perforated metal.
- Model LKF-200 is a dual cartridge unit and is equipped with a primary 30 mesh (590 micron) cartridge cylinder and a 100 mesh (150 micron) secondary cartridge cylinder.

Superflo Pump

On Liftkleen models furnished with the optional Superflo Pump unit, the discharge nozzle from the pump can be adjusted to provide various liquid motions. The nozzle is set at the factory to provide maximum turbulence - a combination of horizontal and vertical fluid movement. To obtain primarily horizontal movement of the fluid, loosen locking set screw and rotate the nozzle so that its discharge is parallel to the back of the tank and the bottom.

Never direct the discharge upward as splashing could occur which would create a potential hazard.

Temperature Control Setting

To avoid tampering, the temperature control is located inside the main electrical control enclosure.

Exercise caution when setting the temperature control as control voltage will be on.

1. **Push Emergency Stop** to turn off the MCR. With the MCR off, only control voltage will be available to the control.
2. Open control enclosure and look for the temperature control, located in the lower-left corner. The control is blue and gray with 3 buttons and an LED screen.
3. To start programming, press the **SET** key once to access the Fahrenheit/Celsius mode. Graymills recommends leaving the control in Fahrenheit mode.
4. Press the **SET** key again to access the setpoint. The LCD will display the current setpoint and the **S1** annunciator will be blinking on and off to indicate that the control is in the setpoint mode. Use the arrow keys to increase or decrease the setpoint to the desired temperature. **DO NOT EXCEED A SETPOINT OF 180°F – This will void the warranty of the LKN.**
5. Press the **SET** key again to access the differential. The LCD will display the current differential and the **DIF 1** annunciator will be blinking on and off to indicate that the control is in the differential mode. Use the arrow keys to increase or decrease the differential to the desired temperature. Graymills recommends a differential setting of 10 degrees.
6. Press the **SET** key again to access cooling or heating mode. The LCD should display **H1** for heating mode. If not, use the arrow keys to set the mode to **H1**. Press the **SET** key again to finish programming.
7. Close control enclosure and pull out Emergency Stop button.
8. Press RESET twice to return machine to "READY" status.

* Dimensions and specifications are approximate and are subject to change

** Custom units available. Contact Graymills for more information

*** Greater capacity units available. Contact Graymills for more information

MAINTENANCE

Follow all Lock Out procedures before performing any service or maintenance.

Lock-Out Procedures

- When performing any maintenance tasks on the Liftkleen be sure that the master on/off air line valve is in the "Off" position.
- Disconnect the main air supply to the rack and/or lid cylinders to remove residual air pressure.
- Turn electric power to machine "Off" at main disconnect.

Lubrication

- Lubricate the lift channels or roller track with machinery grade grease. It is recommended that this lubrication be done at least every month.
- Lubricate the lid hinges by oiling with light machinery oil (SAE 30W or equivalent). This should be done every month. This includes the lid hinges and the lid opening mechanism. Entire lid mechanism should be inspected for wear, especially hinges and bolt attaching lift to cover.

Pneumatic System

- The FR unit on the side of LKN must be checked at least weekly. The moisture in the filter bowl is drained by opening the drain valve at the bottom of the unit. This is especially important during hot weather and may require more frequent attention.
- The pressure regulator is adjustable between 60-110 PSI. Remember, the unit's lifting capacity changes as the air pressure goes up and down. Recommended pressure is 90 - 100 PSI.

Note: The cylinder design is self-lubricating. A Filter-Regulator-Lubricator is not required; a Filter-Regulator is sufficient.

TROUBLESHOOTING GUIDE

CONDITION		POSSIBLE CAUSE	CORRECTION
PLC Control	"READY" light not illuminated	Platform not at top of stroke	Press RESET button
		Machine not "READY"	
		Position sensor malfunctioning	Check/replace sensor
	"LID LIFT FAILED" Screen	Low air supply	Adjust FR to read 90-100 PSI
		Items left on lid causing obstruction	Remove obstruction
		Position sensor malfunction	Check/replace sensor
		Malfunctioning solenoid valve	Check/replace valve
	"LIFT PLATFORM FAILED TO RAISE" Screen	Low air supply	Adjust FR to read 90-100 PSI
		Items on platform causing obstruction	Remove obstruction
		Position sensor malfunction	Check/replace sensor
		Machine overloaded	Remove load
		Malfunctioning solenoid valve	Check/replace valve
	"LIFT PLATFORM FAILED TO DESCEND COMPLETELY" Screen	Obstruction beneath platform	Remove obstruction
		Position sensor malfunction	Check/replace sensor
		Malfunctioning solenoid valve	Check/replace valve
	"SAFETY LINK ACTIVATED" Screen (Heated units only)	Post Emergency Stop reset	Press RESET again
		No air pressure	Ensure air pressure supplied to machine, check air line to safety link for leaks
		Safety link valve malfunction	Inspect/replace safety link valve
		Safety link failed due to fire	Contact Graymills
		Safety link failed due to malfunction	Inspect/replace safety link
	Touchscreen not powering up after disconnect actuated	Circuit breakers in control enclosure tripped	Power off machine, open enclosure, reset breakers if tripped. If problems persist, contact Graymills
	Touchscreen dark while machine cycling	Touchscreen screen saver is on	Touch screen to enable
		Touchscreen failure	Check connections and replace if necessary
Optional Pump	Pump does not run	Electrical service to motor is incorrect	Check electrical supply and correct
		Motor is burned out	Replace motor or return pump to Graymills for repair
		Motor breaker tripped	Check breakers and correct. If problems persist, contact Graymills
		Faulty motor contactor	Check/replace
	Pump runs but does not agitate	Pump rotation is incorrect (3-phase power only)	Swap connections of two of the three electrical leads to the motor (CCW is correct rotation)
Optional Heat	Tank does not reach proper operating temperature	Cavitation due to low liquid level	Raise liquid level to correct level
		Thermostat set too low	Raise thermostat setting
		Faulty heater(s)	Check/replace
		Malfunctioning heater contactor(s)	Check/replace
	Tank takes too long to heat	24/7 settings incorrect	Check timer settings to ensure they are correct
		One element of tri-element heater(s) is burned out	Check/replace
Other	Up/down motion of lift platform is noisy	Roller wheels wearing and may need replacing	Visually inspect wheels for wear. Graymills recommends replacing all wheels at once to minimize risk of future failures and downtime. Contact Graymills for more information.
	Skimmer (optional) not turning on	Bad motor	Check/replace

WARRANTY

Graymills Corporation warrants that equipment manufactured and delivered hereunder when properly installed and maintained shall be free from defects in workmanship.

This warranty does not apply to damages or defects caused by operator carelessness, misuse, abuse, improper application, or abnormal use; the use of add-on parts or equipment which damages or impairs the proper function of the unit and modifications made by Buyer.

Graymills' obligation under this warranty shall be limited to:

1. Replacing or repairing tank and structural parts within one year from the date of installation or 13 months from the date of shipment whichever occurs first. The decision to replace rather than repair shall be made by **Graymills Corporation**;
2. Replacing or repairing components supplied by but not manufactured by **Graymills**, such as pneumatic cylinders, controls, pneumatic systems, motors, heater controls and heaters to the extent such components are warranted by the original manufacturer's warranty, provided that Buyer gives **Graymills** prompt notice of any defect or failure and satisfactory proof thereof.

Before **Graymills** can repair or replace a defective part under warranty, call **Graymills** for a Return Merchandise Authorization number (RMA number must appear on outside of package or it will be refused and returned). Upon prepaid return to **Graymills'** factory, **Graymills'** examination must disclose such part to be defective.

This warranty does **not** apply to expendable parts such as rollers, bearings, cylinder packings and any other parts which need replacement periodically due to normal wear nor to rusting of a mild steel heated unit used with aqueous (water) based cleaning solutions. A new warranty period shall not be established for repaired or replaced materials, or products. Such items shall remain under warranty for only the remainder of the warranty period of the original materials or products. **Graymills** warrants that the equipment will function mechanically as quoted in the published specification. **Graymills** does not warrant process performance nor does **Graymills** assume liability for equipment selection, adaption or installation.

The foregoing warranties are in lieu of all other warranties whether oral, written, expressed, implied or statutory. Implied warranties of fitness for a particular purpose and merchantability shall not apply. **Graymills'** warranty obligations and Buyer's remedies thereunder (except as to title) are solely and exclusively as stated herein. In no case will **Graymills** be liable for consequential damages, loss of production or any other loss incurred because of interruption of service.
